								8,471	8	9			

13. The difference of Rs. 8,471-8-9 increase in the gross receipts during the year under report accrued under the items of Sugar, Ghi, and other articles of food, Drugs, Spices and gums, Tobacco, cloth and other articles not included in above, also Bonded Warehouse.

Gross Octroi receipts.

The increased imports of the foregoing articles was largely due to their consumption and use at numerous marriages and feasts, and also to a very appreciable increase in Kuppas (raw cotton) the result of a good monsoon and a favourable market.

The decrease under the other items is due in some extent to the season being a good one, hence the poorer classes had not to resort to selling fire-wood and disposing of their brass and other vessels. This accounts for the *large difference under items 6 and 12 of the foregoing statement.*

Net receipts from Octroi.

14. The net receipts from Octroi and incidence per head of population during the past ten years are compared in the statement below.

The increase was due to the purchase of iron for latrines and urinals and the sanctioned increments of the staff. The staff consists of the following.

1. Daroga.
2. Jamadars.
55. Male sweepers.
6. Female sweepers.
3. Bhishties.

The carts are driven by contract with animals owned by the sweepers who receive Rs 5 per mensem for their feed and keep.

41. Report on Sanitation. *1.—Scavenging.*

(*i*) Main streets.

The streets and lanes are swept twice a day, once in the morning before sun rise and again in the afternoon. The street sweepings, are collected and deposited at fixed depots from where they are carted outside the city.

(ii) Public latrines.

There are 8 public latrines in the town, out of which 5 are of old fashioned masonry construction and 3 have been made of galvanized iron sheets with movable galvanized iron buckets. The masonry latrines will gradually be replaced by the movable iron ones which are appreciated by the people.

(iii) Private latrines.

The majority of private latrines are not kept in a satisfactory sanitary condition. A large number of them are built in a very absurd way, and it is found very difficult to correct them. All these old and rickety privies are closely watched, and no opportunity is lost in getting them rebuilt and re-modelled on sanitary plans.

The newly built privies are clean and satisfactory. In these privies the excreta is received in two galvanized iron buckets, and the ground is never allowed to be contaminated. Two doors are invariably kept in them, one for the use of the occupier of the house, and the other for the sweeper. These doors screen them from view and no bad smell or ugly sight is experienced by the passers by.

(iv) Public urinals.

There are 32 Public urinals in use in the town. All of these are of masonry construction. It has been decided, however to replace the old masonry urinals by galvanized iron ones and in future to place iron ones wherever required.

II. Removal and disposal of the night-soil and foul water.

The night-soil from the private latrines is carried by the Birt sweepers in bamboo baskets and deposited in the conservancy carts at the public latrines.

The refuse from the public latrines also is deposited in the carts and the whole is taken outside the town. Besides these conservancy carts there are big iron reservoirs to hold the refuse.

There are 19 conservancy carts in use. The foul water from the public and private latrines in the town is removed in the conservancy carts for which purpose there are 10 in use. It is proposed to increase the number of Conservancy carts the present number being found insufficient.

The night-soil is deposited in trenches about 2½ deep in a field about 2 miles to the east of the town. The foul water is thrown away on waste land.

III. Drainage.—

(i) The surface drainage is sufficient but unfortunately in many cases the drains are covered and inaccessible.

The rain water from the streets is conveyed through the side drains which are mostly covered and do not admit of thorough cleanliness.

The water from other parts of the town is carried by superficial *nullahs* which pass through the city wall and finally empty themselves into the *Balad Nullah.*

At no less than three places these surface *nullahs* pass for considerable distances underneath dwelling houses. This is not satisfactory and is unsafe for the owners of the houses and the Municipal staff who clean them out.

(ii) House drainage.—

The house drainage is gradually improving. No masonry "purnalahs" or cesspools are allowed.

The water is conducted through cast iron pipes and received in iron barrels placed on the chabutras outside the house where they are open to supervision.

IV. Water Supply:—

The water supply of the town is got from Municipal and private wells. Most of these wells are situated on the eastern side of the city and receive their supply by percolation from the Bichurli tank and the surrounding country. This tank does not possess a constant and sufficient supply of water, partly perhaps owing to the imperfect feeder nullahs within its catchment area and partly on account of the tank having a very permeable and porous sub-soil.

On the western side of the city there are only a few wells.

There is no certainty of the private wells being always accessible, as many of them are within the compounds, and it is difficult to supervise their cleanliness.

All these circumstance have led the Committee to take into consideration the subject of providing a constant supply of good and wholesome water, and it is hoped that before long, Water Works will be started in Beawar.

General.

The construction of a Municipal Hall and office which has been for a long time under the consideration of the Committee took definite shape on the 2nd of March 1907 when at the Meeting held on that day plans and estimates were placed before the Committee, and it is confidently hoped that the much needed building will soon be sanctioned and construction commenced.

The necessity of a good water supply is still greatly felt here but the difficulty has always been to find a site which will give a regular supply of water. A great deal has been done in this direction during the present year and trial wells below the Jalia and Makrera tanks have given most promissing results. Surveys and levels from these two places have been completed and it is hoped that before very long the Committee will be able to submit one or more definite schemes to the Chief Commissioner.

Mr. Robinson the Secretary and Engineer has been most zealous as regards these projects and his help has been invaluable.

The Committee have passed an uneventful year as regards litigation. One appeal in pending in the court of the Commissioner.

No description of the Nazul properties held in trust has been given in this report as the Special Nazul Sub-Committee have not yet completed the list.

In conclusion I would thank the Committee for the help which they have always invariably given me. The Sub-Committees have held their meetings with regularity and all the members have shewn their readiness to help in the improvement of the Municipality and town. Mr. Robinson the Secretary and Engineer has a thorough knowledge of his work, his office is always kept up to date and the clerks working under him have done their work well and conscientiously.

W. G. HUTCHINSON, Captain,

Chairman,

Municipal Committee, Beawar.
